

Modernization at the push of a button. function+

Your “plus” is flexibility.

Modernization at the push of a button.

Successful carpenters know: The perfect machine grows with you. If requirements change, it adapts. In the best case, at the push of a button. Until now, this was still a dream of the future, but today, it's a reality. With **function+**, HOMAG is setting standards in terms of flexibility: You can enable the machine functions you need – with just a few clicks via tapio, without a service technician, all within 48 hours.

First, test is free of charge.

Then, unlocking more is as easy as child's play.

The advantages of function+ are obvious: You only pay for extended functions when you really need them. And if you are unsure whether a function is useful, no problem. Simply test it – completely free of charge and without obligation. At the start of function+, you can modernize various new machines with practical solutions – at the push of a button, without a service technician. In addition, IntelliGuide Classic is now part of the machine standard on the SAWTEQ S-300/400. You can activate the assistance system on all new machines of this SAWTEQ with function+.

+ YOUR PLUS IS AESTHETICS.

Zero joint technology with the airTec process.

You buy a CENTATEQ E-series with PowerEdge Pro. At the start, you rely on hotmelt edges. Gradually, more and more customers want a zero joint. Then you get the airTec process at the push of a button.

+ YOUR PLUS IS DATA SECURITY.

Automatic backups with the BackupManager.

Your machines contain workpiece programs that are perfectly adapted to your production. But manual backups to external data carriers cost valuable production time. Good that you can create automatic backups on the intranet with BackupManager – without additional software.

+ YOUR PLUS IS PRECISION.

Higher accuracy due to stress-free cutting.

You use your new SAWTEQ for carcass production. Later, you would also like to manufacture fronts; the tolerance limits for dimensions and angles are now much tighter. The solution: with function+ you activate the stress relief program.

+ YOUR PLUS IS PLANNING.

Practical tool path detection.

You buy an EDGETEQ S-500 or a CENTATEQ E- or P-310, -510 or -710, each perfectly tailored to your operation. The non-productive times for tool changes increase with the number of jobs. With function+ you activate the tool path detection and increase the plannability.

+ YOUR PLUS IS EFFICIENCY.

Time-saving recuts with combiTec.

To be able to work cost-efficiently, you rely on highly nested cutting plans. The number of recuts is increasing, which your capacities actually do not allow. This is exactly where the combiTec process comes in – as a time-saving recut function that you can activate via function+.

+ YOUR PLUS IS PRODUCTIVITY.

Optimize operation with MMR Professional.

Your business is running at full speed. Due to rising costs, you ask yourself where optimization potential lies. It's good that MMR Professional shows you where action is needed. Even better: You can activate it at the push of a button after the test phase.

Would you like to learn more, or do you have ideas for additional functions that should be available under function+?
