at LIGNA in Hall 14.

**LIGNA 2025**  
**26. – 30.05.25**  
**Hall 14**

Get your tickets now.

## Our service highlights at **LIGNA**

### **sR Bridge**

Our new remote service connection. The sR Bridge protects the remote connection against cyberattacks and makes remote maintenance easier, even for older machines. With this service, we offer a GDPR and Cyber Resilience Act-compliant connection that puts you in a good position for the future.

### **eShop**

The new direct link to eParts provides a further benefit for our eShop. You can select the right spare parts based on the machine number and order them directly. In addition, you continue to benefit from the traditional 3 % online discount\* and free standard delivery\*.

[shop.homag.com](https://shop.homag.com)

\*Valid in Germany and Austria.

### **predictive Diagnosis**

With predictive Diagnosis, we have a service product in our portfolio with which we can support you in the proactive maintenance of your machine. The machine data is analyzed and evaluated using AI and a recommendation for action is created for you.

### **Modernization**

Through targeted modernization measures, we increase the performance and efficiency of your machines, from small hardware and software adjustments to complex automation through robotics and return technology.

Our experts will run a detailed check and update of the entire machine control system to ensure that your systems are state of the art and optimally protected against cyber threats.

Visit us in Hall 14 at LIGNA 2025. We would be happy to answer your questions on the above topics.
