

Surface CompetenceCenter. **Surfaces Expertise Live in Action.**

When determining the correct solution for manufacturing high-quality surfaces, performing extensive test runs are highly recommended. At HOMAG, we work in partnership with IVM Chemicals GmbH. In the technical center for our paint specialists in Herrenberg, machines are available for test purposes all year round — live in action.

Everything under one roof – sanding, priming, intermediate sanding and coating

The technical center is the ideal starting point for providing customers with the best possible advice. Experts from the surfaces teams at HOMAG and DÜRR, application engineers from Croma Lacke, and specialists from the IVM Group's research and development laboratories provide comprehensive, professional and personalized advice.

In Herrenberg, application solutions are presented live with numerous opportunities for users to test materials, a wide range of paint systems, machine technology and procedures, and how they interact.

More information:
