## Configurator3D – Integrated software solution for the furniture industry

**EVER INCREASING INDIVIDUALITY. AT AN EVER INCREASING PACE.** As a manufacturer of furniture and interiors you know that: Customers have an ever growing list of special requests to be fulfilled and would ideally like next-day delivery. To reach the point of sale, flexibility, individuality, and speed are hugely important to you. That's why it's good to be able to rely on Configurator3D. The software lends you its support with a modular end-to-end system, helping to efficiently shape your order processes from sales to production.

### YOUR SOLUTION

Configurator3D

### CONTENTS

- 04 A universal solution
- 08 3D design – configure furniture during the sales conversation
- 10 eBusiness with DesignerWeb for B2B and B2C
- 12 Order processing for the requirements of the wood and furniture industry

## A universal Solution

**VERSATILE FROM THE START.** Do you feel that individual sales are important? Do you want efficient order processing? And you also expect the highest productivity in manufacturing? Then we recommend Configurator3D. Whether you are an expert interior designer or furniture manufacturer, this software has been specially designed to meet the requirements of the furniture industry. Designer3D offers your sellers the perfect design software for furniture sales. The system is driven by the Configurator3D - a highly flexible, graphic product configurator. This allows you to not only manage the technical configuration, but also the commercial elements. The data can be used continuously from the point of sales through to production. Part lists and machine data are automatically generated and are immediately available for production.

**Sales software for furniture and interior design.** There are no limits to your creativity in sales. Our furniture design software Designer3D allows you to individually plan furniture, powerfully present it and sell it more successfully. Comprehensive libraries for decorative items and e-devices allow living situations to be fully planned. This is presented and brought to life for the end customer through high-end rendering or via virtual reality apps.

**Multi-Channel Sales.** Are you looking to attract new customers? Do you want to sell outside the showroom? DesignerWeb allows you to create configurators for your furniture that will offer inspiration and are easy to use. That means that your customer can have fun creating and ordering their own furniture online. Place your product range on the internet and make it available to all, thereby tapping into new business models and sales channels.

**Graphic recording of orders.** For catalog-oriented manufacturers of kitchen, office, living, and bathroom furniture, the Configurator3D is central to graphic recording of orders. The graphic 3D product configurator is used to create highly customized furnishings in seconds. There are no limits to the diversity of variants, therefore as a manufacturer you have the ability to respond to the rising demand for customized furniture and special requests.

## Software of tomorrow for the demands of today

**WHAT YOU NEED, WHEN YOU NEED IT: WITH THE SUPPORT OF HOMAG SOFTWARE SOLUTIONS.** To enable your sales team to meet customer requirements even more effectively, you need design software and 3D apps that allow them to work easily, intuitively, and quickly. Designer3D lets you design tailored rooms according to the expectations of your customers and inspire with high-end renderings. Offers are generated directly from the planning module, thereby eliminating errors since catalog data and prices are updated in real time.

## Designer3D. Leaving more time for your customers

**Designer3D offers fast, easy and professional configuration of furniture during the sales conversation.** The software can be used intuitively, allowing you to focus entirely on your customers. Our software allows you to plan furniture individually and present it in an inspiring way, thus making it more successful. Interior designs can also be devised with the same ease, and with the addition of some decorative elements and light, your customers will be truly inspired.

**Intuitive, flexible, clear: Support your sales team with software that successfully generates sales and is fun to use too!**

**Full attention on the customer.** Since the software learns quickly and can be operated intuitively, your customer not only receives furniture that is first-class in terms of production and design, but your full attention too.

**Dreamed? Designed!** Design furniture and interior design elements using the configurator solutions. Sterile rooms make way for individually crafted dream living spaces: Make use of the extensive libraries of decorative objects, lamps, and light sources to breathe life into the design.

**Perfect presentation.** Top-quality visualization is possible thanks to a render farm with the necessary performance, enabling you to create first-class presentations with high-end quality. When a variant is requested, this can be delivered quickly with the latest offer, which is continuously updated through integrated pricing.

## DesignerWeb. Twice as good for B2B and B2C

**BUY AND SELL WITH APPS — MAKE WORK FUN.** Since your customers' requirements are continually growing, we offer solutions that make for an inspiring customer experience. The following applies for configuration and planning too: Buying and selling must be simple and fun. Our ProCollection configurator solutions allow you to develop apps for all use cases with an integrated data system. Ensure each sales channel has the correct application. From the web-based, all-inclusive furniture planning to the 3D plug-in for your online shop.

**Simply inspiring: DesignerWeb.** The customizable HTML interface allows you to create configurators for your furniture that will offer inspiration and are easy to use. This means that your customer can have fun creating and ordering their own furniture online.

**Flexible. Varied. Three-dimensional.** Furniture can be designed based on features and also directly and dynamically designed in a 3D environment. The variety of products is as limitless as the configuration options. Whether cabinet systems or cabinet furniture, chairs, beds or upholstered furniture — any request is possible.

**Any time: Design furniture wherever you want.** Anyone who sells online knows that each customer has a different terminal or operating system, but the software should run anywhere. Our solutions work on PCs, laptops, tablets, and smartphones, so your customers can plan their dream furniture from the comfort of their home, irrespective of which device they are using.

**Different applications — one system.** Maximum possibilities with minimal effort. This describes our integrated catalog data concept, in which the data creation and the maintenance effort is reduced to a minimum. The same data base is available for a wide variety of configurator solutions and all sales channels. As you would expect, you can change the information for the respective target group. Then use the catalog data of the system at the point of sale, in order processing and production.

## Order processing: integrated Processes: integrated

The graphic order acquisition accelerates and simplifies your order process and ensures optimum data quality. The software used for this has been designed to meet the requirements of the wood and furniture industry. This means that, with the ProCollection, you're not only on the safe side — you're on the fast side too. The data flow never falters: Order data is transferred directly from the point of sale to production.

**Fast: 3D product configuration.** The Configurator3D allows you to configure customized, feature-based furniture in a matter of minutes.

**Simple: Order processing and management.** Use the organizer at any time for all customer orders and quickly respond to requests.

**Automatically: Create order documents.** It couldn't be more direct: Commercial and technical documents such as offers, view drawings, layouts, and item lists are generated.

## Individual catalogs, secure configuration, efficient order processing

Due to the high diversity of variants, the business processes of the furniture industry exhibit a lot of industry-specific requirements that are essential for ensuring success and a competitive edge. The software modules of the ProCollection best serve these requirements. At the heart of order processing is a powerful, graphic product configurator.

This supports position recording with tests and plausibility checks, and produces complete and technically correct data for the entire order and production process. The technical order processing comes next — from the BOM resolution to the generation of machine data.

**Intuitive and easy: Graphic order entry.** Configuration and planning capabilities allow you to generate orders quickly and with technical accuracy. The Configurator3D uses the same catalog data as the design solutions at the point of sale. This means that orders can be transferred directly from sales to order processing, where the only task remaining is technical examination. For the processing of special requests, the technical job agent can make use of enhanced configuration options.

**Dinner is served: spotlight on the kitchen.**

- **Acquisition items and e-devices.** A comprehensive range of web-based libraries for built-in units and acquisition items support position tracking in the kitchen appliance sector
- **Work plates, plinth and rim strips.** With the longitudinal part generation, the recording of work plates, plinth, and rim strips is carried out automatically
- **Blank front.** For front models with continuous handles, the adaptation of the design and of sectional rails occurs automatically

**Smart solution: catalog data system.** Specially designed for the requirements of the furniture industry, the software enables sales items and catalogs including highly flexible pricing to be created in a matter of minutes. Data is generated in a graphical environment, based on rules and features. The technical development of furniture and objects is supported — industry-typical construction types are already stored in the system. For the creation of catalogs, data can also be transferred from ERP and CAD systems.

**Automatic: BOM resolution.** Parts lists are automatically generated at the end of the order processing and are sent to the production system. For the following processes, e.g. for materials management, the data can also be transferred to an ERP system.
