

A man with a beard and a grey polo shirt is standing in a factory, holding a tablet. He is smiling and looking at the camera. The background shows industrial machinery and a blue wall.

Make room for the important things.

Automatic edge management.

Edge Data Package

Managing your edge data has never been easier!

Don't have an overview of your edgeband stock? Did you run out of edgeband material or order too much? The Edge Data Package (Edge Data plugin + Edgeband Management Set) enables you to access a catalog containing all edgeband data from leading edge suppliers directly on the machine. While woodCommander 5 makes direct operation on the machine easier, the plugin links the machine to the Edgeband Management Set.

HC | HOMAG

Your benefits at a glance:

- ✓ **Complete transparency:** all information about your edgebands available at a glance.
- ✓ **Lightning-fast and error-free recording** of your edge data – without any manual intermediate steps.
- ✓ **Easy and continuous access** to all edgeband data from leading edge suppliers directly on your machine.
- ✓ **Sustainable:** complete overview of edge stock and storage locations. This reduces duplicated orders and saves costs.
- ✓ **Efficient networking:** With the Edge Data plug-in, woodCommander 5 is used to directly connect your machine (e.g. EDGETEQ S-500) and the edgeband assistant.

Special features:

- The edgeband assistant creates an **overview with all information about the edge material and material stock.**
- **This information can be called up in real time:** Is an edgeband in storage or in use? And how much of it is still in stock?
- The plugin allows you to access a **catalog on the machine that contains all edge information** from leading edge suppliers.
- **Saves time and effort:** The plugin transfers relevant production data such as thickness, height and available lengths of the selected edge roll directly from the app to the machine.
- **The edge banding machine reports the offcut length** of the edge roll used back to the app of the edgeband assistant via the plugin.
- **There are two variants** – together, we can find out whether „Basic“ or „Performance“ is better suited to you.
