# HOMAG INTELLIGENCE

## The digital, modular platform for sales, configuration and production

Today, companies can access a wide range of software tools on the market throughout the entire process chain – from the design and sale of furniture to production/delivery – each with different data. From now on, these processes can be seamlessly linked together.

HOMAG INTELLIGENCE is a comprehensive open platform that is the first solution on the market to ensure an integrated data flow between furniture sales and furniture production processes – regardless of the machinery, the software landscape or the size of the furniture manufacturer's business.

## Your benefits at a glance:

- ✓ **One platform for all processes from sales to production:** Seamless mapping and networking of the processes of furniture sales and production – solution-based for every size of company.
- ✓ **Continuous networking of all data:** Integrated data flow from configuration (sales) to order management (work preparation) and handling of material and order data (production).
- ✓ **Transparent data without duplicate data management:** All relevant sales and design data throughout the entire process in one place, with one login – updated automatically.
- ✓ **Error-free design:** Predefined and at the same time individually adjustable libraries for error-free designs.
- ✓ **Flexible in production:** Simple, agile order control using in-house production, suppliers or partner networks.

## Special features:

- **Scaling without risk: The platform can be expanded on a modular basis**  
Packages, individual software modules or the complete solution: HOMAG INTELLIGENCE can be individually tailored due to its modular structure and grows with your requirements.
- **Open for everything and easy flow:**  
Thanks to open, coordinated interfaces, HOMAG INTELLIGENCE is the first solution on the market to create a continuous data flow data flow between the furniture production processes – from sales to design and production on the actual machines – regardless of the machinery, existing software landscape or the size of the company.
- **State-of-the-art technology:**  
By using the latest technologies (central data storage in the cloud, AI), companies with HOMAG INTELLIGENCE are preparing themselves for the challenges of the future.  
The HOMAG INTELLIGENCE platform is the solid basis in which the data is processed cloud-based and forwarded to software systems, process steps and machines.
